

Who are behind GIS tailor-made?

Ubo Pakes started his GIS career in 1991. His experience with consultancy and GIS education spans a broad range of organizations, not only in the Netherlands, but also elsewhere in Europe and the Far East. His key expertise lies in structuring and managing GIS projects, especially when complex spatial analysis is required. He is also highly experienced in the design and delivery of tailor made training solutions

Leny Ocasiones holds a PhD in Sociology and Anthropology and has extensive experience in sociological research and gender studies. Since she also teaches at the University of San Carlos and she has a broad network with universities and NGOs in the region. She is highly experienced in the design and delivery of training and participatory processes, especially with local government and NGOs.

GIS tailor-made has an impressive track record in training staff in GIS and the delivery of spatial information in a broad range of organizations worldwide. At GIS-tailor made we believe that spatial data and processes are unique. We'd be delighted to offer a GIS tailor-made solution to you.

GIS tailor-made is proud to be partner of Van Hall Larenstein University of Applied Science in the Netherlands and Geoplan Cebu Foundation, inc. in Cebu City.

GIS tailor-made

Tailor-made GIS for you!

Because spatial data are special data

Why GIS tailor-made?

Many companies world wide fail to make optimal use of the possibilities that spatial information has to offer. It often seems to be too troublesome. You need to collect the right data, transform them into the required format or digitize existing paper materials. Once the data are digitally available, a logical and structured (meta) database is often not developed. That often means that the information is not as useful as it might have been.

We believe that there is a better way. GIS tailor-made can deliver that for you. That frees you up to make optimal use of the data we provide. We work with you and for you to achieve that.

In co-operation projects, personal contacts and tailor made training are vital for success. Every project is different and our tailor made approach will reflect that. Delivering a standard product is just not enough. At GIS tailor-made we believe that every training and every product should be tailor-made. Always.

A selection of our projects

These projects give an example of the type of services we are able to offer.

- Monitoring changes in water systems based on shape files and aerial photographs for water boards in the Netherlands.
- GIS training for staff of Prefecture Dolj, Craiova, Romania within the framework of a Dutch international co-operation project
- Combining several GIS datasets of a boating atlas in order to make it applicable for a new GPS based navigation system for boats.
- Desk study to find a partner in Thailand for a joint curriculum development project with a Dutch University
- Visiting Chief Technical Adviser for the VocTech program in Vietnam

GIS tailor-made specializes in projects specifically tailored to your needs. We operate internationally and we have our residence in the Philippines. With our unique combination of highly skilled and motivated staff in the Philippines and our international experience, we are able to offer you a unique range of services.

We offer those elements of GIS that are specialized such as the digitizing of paper data, data conversion or training. We do the hard work so that you can focus on achieving your goals.

We offer amongst others the following services:

- ✓ Digitizing paper maps
- ✓ Building spatial datasets
- ✓ Building spatial websites
- ✓ GIS training
- ✓ GIS consultancy
- ✓ Project management
